Confidence in Antisepsis

'Dettol' is an efficient bactericide. It is persistent. It is stable. It is non-poisonous, non-staining. Clear and clean, it is even pleasant in use. These properties have combined to distinguish 'Dettol' and to win professional confidence. 'Dettol' can be used at fully effective strengths without danger or discomfort. Moreover, germicidal efficiency is maintained when blood or pus – even in considerable quantity – is present.

From all Chemists and Medical Suppliers. Special sizes for Medical and Hospital use.

DETTOL
TRADE MARK
THE MODERN ANTISEPTIC

For GASTRIC Disorders

FOR the symptomatic relief of practically all types of Gastric Disorder, including those of nervous origin, there is no more dependable product than Maclean Brand Stomach Powder. The excellence of its formula is universally known. Add to this the fact that Maclean Brand Stomach Powder is prepared with meticulous care to ensure a uniform composition and its dependability is fully explained. Do not forget, therefore, when requiring or recommending an antacid to specify Maclean Brand Stomach Powder.

You can safely Use — and Recommend

Obtainable Everywhere price 2/3 and 5/7½ (inc. Tax) Only genuine if signature ALEX. C. MACLEAN appears on the package.

THE ROYAL COLLEGE OF NURSING ELLEN SARAH FOUNTAIN GRANT

The Council of the Royal College of Nursing will consider application for the above grant to the value of £10 to be expended on some form of post-graduate study.

The grant is available to any nurse who is a member of the Royal College of Nursing and who is based at one of the following hospitals:—

BROMPTON HOSPITAL FOR CONSUMPTION AND DISEASES OF THE CHEST, S.W.3

LAMBETH HOSPITAL, S.E.11.

SEAMEN'S HOSPITAL, GREENWICH, S.E.10.

The successful applicant will be asked to render a statement showing how the grant has been expended at the end of the course undertaken.

Application forms may be obtained from the Director in the Education Department, Royal College of Nursing, 1a, Henrietta Place, Cavendish Square, London, W.1. (14)

KING'S COLLEGE HOSPITAL DENMARK HILL, S.E.5

The King's College Hospital Nurses' League is offering a Scholarship of £50 to a member of the League to enable her to take a course of post-graduate study. Hospitality for the duration of the course will be given if necessary.

Applications, with full particulars of experience to be sent to Sister-Matron, not later than July 18th, 1944. The applicant is asked to state the post-graduate course she proposes to take. (264)

CENTRAL MIDWIVES BOARD

Arrangements are being made for examinations of **Pupil-midwives** to be held in August and September, 1944, as follows:—

First Examination

Written: 16th August.

Oral and practical:

3rd Aug. ... Birmingham, Leeds.

4th Aug. ... Croydon.

5th Aug. ... London, Bristol, Liverpool, Sheffield.

6th Aug. ... Manchester, Newcastle-on-Tyne.

Second Examination

6th Sept. ... Birmingham, Leeds.

8th Sept. ... London, Bristol.

9th Sept. ... Manchester.

The examinations will be held at other centres, if necessary. Arrangements are subject to notification at short notice.

L. FARRER BROWN,
Secretary. (356)

OFFICIAL APPOINTMENTS

THE NURSING RECRUITMENT SERVICE

King Edward's Hospital Fund for London invites applications for the post of Assistant Secretary at the Nursing Recruitment Centre.

Candidates should be State-registered nurses; experience in secretarial and administrative work and public speaking will be taken into consideration, but is not essential. Salary according to qualifications and experience, but not less than £250 per annum. The successful applicant will be asked to participate in the Federated Superannuation Scheme for Nurses and Hospital Officers (Contributory).

Applications stating age, qualifications and previous experience, should be sent before 20th July to the Secretary, Nursing Recruitment Centre, 10, Cavendish Square, W.1. (325 P)

RE-UNIONS

DISTRICT INFIRMARY, ASHTON-UNDER-LYNE

The first prize-giving will be held in the Nurses' Home on Saturday, July 29th, at 3.0 p.m. This will take the form of a reunion of past and present nurses.

Matron will be pleased to welcome all nurses who trained or who have held staff nursing appointments at the above hospital.

Unable to attend, please communicate before 24th. (312)

June, 1944.

PUBLIC HEALTH VACANCIES

None of the advertisements below relate to a woman between 18 and 40, inclusive, unless such woman (a) has living with her a child of hers under the age of 14, or (b) is registered under the Blind Persons Acts or (c) has a Ministry of Labour permit to allow her to obtain employment by individual effort.

CITY OF MANCHESTER PUBLIC HEALTH DEPARTMENT
ORGANISER—CARE OF UNMARRIED MOTHER (TEMPORARY APPOINTMENT)

The Public Health Committee invite applications for a **Health Visitor,** or State Certified **Midwife,** or an experienced person with Social Science qualifications, to act as ORGANISER—CARE OF UNMARRIED MOTHER.

The salary of the Health Visitor or Midwife

(continued in next column)

will be in accordance with the Rushcliffe scale. The salary for a person with Social Science qualifications will be from £235 to £315 per annum, plus bonus (at present £40 6s. 0d. per annum) and in deciding the commencing salary of the successful candidate, consideration will be given to qualifications, experience, and the salary at present received.

Application forms may be obtained from the Medical Officer of Health, Public Health Department, Town Hall, Manchester 2, and must be returned endorsed "Organiser" to reach him not later than July 29th, 1944.

Canvassing in any form, oral or written, direct or indirect, is prohibited.

Town Hall. R. H. ADCOCK,
Manchester, 2. Town Clerk.
(401N)

SUTTON IN ASHFIELD URBAN DISTRICT COUNCIL
APPOINTMENT OF ADDITIONAL HEALTH VISITOR

The above Council invite applications for the appointment of an additional **Health Visitor,** at a salary according to the scale recommended in the Second Report of the Nurses Salaries Committee, i.e. £270 per annum, rising by annual increments of £10 to a maximum of £360 per annum, subject to satisfactory service, with a travelling allowance of £5 per annum, and £12 for uniform.

The appointment will be subject to the Local Government (Qualifications of Medical Officers and Health Visitors) Regulations.

The appointment also is subject to the provisions of the Local Government Superannuation Act, 1937.

Applications, endorsed "Health Visitor," stating age, qualifications, experience, whether able to cycle and position in regard to National Service, and accompanied by copies of two recent testimonials, must reach the undersigned not later than Saturday, the 15th July, 1944.

Canvassing, either directly or indirectly, will be deemed a disqualification.

Portland Square. LUCAS PEPPER,
Sutton-in-Ashfield, Clerk to the Council.
20th June, 1944. (156N)

WORCESTERSHIRE COUNTY COUNCIL
APPOINTMENT OF TEMPORARY SCHOOL NURSE
EVESHAM DISTRICT

The Council invites applications from Nurses who are over the age of 41 years for the post of **Temporary School Nurse** for the above-mentioned district.

Applicants must possess a certificate of three years' training at a General Hospital or full training in a Children's Hospital, with or without the Health Visitor certificate. The duties will be mainly connected with school children; it would be an advantage if the appointed officer possesses a car, in which event a car allowance will be payable.

Salary and allowances during sickness will be in accordance with the Rushcliffe report.

Copies of the application form and the terms of appointment can be obtained from the County Medical Officer, County Buildings, Worcester, to whom applications, accompanied by copies of not more than three recent testimonials, must be delivered not later than the 15th July, 1944.

W. R. SCURFIELD,
Clerk of the County Council. P94
Shirehall, Worcester. (282 N)

KENT COUNTY COUNCIL
HEALTH VISITOR

Applications are invited for the appointment of a **Health Visitor** for combined duties in the Maternity and Child Welfare, School Medical and Tuberculosis Services.

Applicants must be (a) S.R.N., (b) S.C.M., or possess the certificate of Part I of the C.M.B. examination and (c) possess the new Health Visitor's Certificate of the Royal Sanitary Institute. Use of own motor car is essential.

Salary according to experience within the appropriate Rushcliffe scale, £270 to £360 by £10 increments. Uniform. Subsistence and travelling allowances. Superannuation. Medical examination necessary.

Application forms obtainable from the County Medical Officer, County Hall, Maidstone, to whom they should be returned when completed, by 18th July, 1944.

County Hall. W. L. PLATTS,
Maidstone. Clerk of the County Council.
29th June, 1944. (336N)

BOROUGH OF WIDNES
HEALTH VISITOR

Applications are invited for the above post. Applicants should be State Registered Nurses who are also State Certified Midwives, and who hold the Health Visitors' Certificate.

Salary and conditions in accordance with the Rushcliffe Report. The appointment is subject to the provisions of the Local Government Superannuation Act, 1937, and the successful candidate will be required to pass a medical examination.

Applications, stating age, qualifications, experience and present employment, together with copies of two recent testimonials, should be addressed to the Medical Officer of Health, Health Centre, Kingsway, Widnes, and delivered not later than the 18th July, 1944.

Town Hall. JAMES WALLACE,
Widnes. Town Clerk.
(383N)

CITY OF PLYMOUTH EDUCATION COMMITTEE
APPOINTMENT OF SCHOOL NURSE

Applications are invited from general trained State Registered Nurses for the above whole-time appointment.

Preference will be given to nurses possessing the Health Visitor's Certificate and who have had special experience with children.

Salary will be in accordance with the Rushcliffe Scale for School Nurses, £270, rising by annual increments of £10 to £360 if possessing the Health Visitor's Certificate, or £220, rising by annual increments of £10 to £310 if not possessing the Certificate, together with uniform and travelling expenses. Previous experience in a similar capacity will be taken into account in fixing the commencing salary within the appropriate scale. The appointment is subject to the provisions of the Local Government Superannuation Act, 1937, and the successful passing of the Council's medical examination, and is terminable by one month's notice on either side.

Applications, giving age, particulars of training, qualifications and experience, should be sent as soon as possible to the Medical Officer of Health, School Medical Department, "Seymour," Seymour Avenue, Mannamead, Plymouth. ANDREW SCOTLAND,
Education Offices, Director of Education.
Cobourg Street, Plymouth. (320N)

Masseuse required. Salary according to B.H.A. Scale. Apply giving particulars of qualifications and experience to the Matron. (91 N)

CLASSIFIED ADVERTISEMENTS CONTINUED ON PAGE IX

GOODWILL

The Hospitals and Public Institutions of this country have done nobly. The permanent crusade has not abated in force yet war demands have been met. Because Stethos House is enthused by the pioneer spirit and by personal knowledge, its service is appreciated by harassed matrons and superintendents. Hampered by regulations and control, the management and staff together have done their best to maintain the integrity of that service and that quality which is the asset of Stethos House. The services of experts are still available to solve problems of hospital textile supply and uniforms and theatre equipment. Our ambition is to emerge from the war with undiminished goodwill.

Nursing Times

VOL. XL. No. 28 SATURDAY, JULY 8, 1944

EDITOR: MISS K. F. ARMSTRONG, S.R.N., S.C.M., DIPLOMA IN NURSING, LONDON UNIVERSITY

The Assistant Nurse and Her Training

THE draft syllabus for the training of the assistant nurse is now with the Minister of Health and will, we imagine, under the Nurses Act, 1943, be 'laid before each House of Parliament forthwith'; if it is approved by the Minister of Health, and if, after forty days, neither House has resolved that the regulation be annulled, it will become the accepted method of preparation for admission to the Roll of Assistant Nurses. We publish the syllabus in full in this issue, together with the report of the meeting of the General Nursing Council on June 23, at which the matter was again fully discussed. We would draw the attention of all nurses to these two items, for they are matters which every nurse should consider carefully.

The difficulties of the legislation for a second grade of nurse only become fully apparent when the details of her training and syllabus of instruction come up for decision. The truth of this is borne out by the fact that the General Nursing Council, although it has sent the syllabus to the Minister of Health, has decided to re-examine the distribution of the assistant nurse's practical experience.

The preface to the syllabus sets out the length of the training, and suggests its scope. It will last for the period suggested by the Horder Nursing Reconstruction Committee on the Assistant Nurse, that is, for two years. At the May Council meeting the Assistant Nurses' Committee recommended that the training should consist of one year spent in a general hospital for the chronic sick, and one year spent in either an infectious diseases hospital or a sanatorium or a combination of both. This had been modified and the final draft suggested that at least one year should be spent in a hospital for the care of the chronic sick, but one year might be spent in a hospital for infectious diseases and/or a sanatorium for treatment of pulmonary tuberculosis. This question raised considerable discussion, and is a matter of great importance.

Actually the suggestions followed closely the recommendations of the Horder Report, except that the Horder Committee suggested that, in her second year, the assistant nurse should have experience in fever, mental or tuberculosis hospitals and return to hospitals for the chronic sick, while attending classes in cookery and occupational therapy. At no time in the public discussions of the General Nursing Council has any suggestion been made that the assistant nurse should be given experience in mental nursing. Since many cases of chronic illness occur among the elderly, whose mental powers are as liable to degeneration as their physical powers, it appears on the surface that experience among persons expert in the handling of such cases might be an invaluable part of the training of the assistant nurse.

It may be argued that the mental hospital trains nurses for the Mental Register of the General Nursing Council, and, therefore, has no place for a second grade of nurse. Many persons do hold this opinion: yet it is a fact that most mental hospitals contain large numbers of persons engaged as nurses who are incapable of training for the Mental Register of the General Nursing Council, and yet should surely fit somewhere into the pattern of State-registered nurse or enrolled assistant nurse. At present many trainees work for years in these institutions but never obtain any qualification.

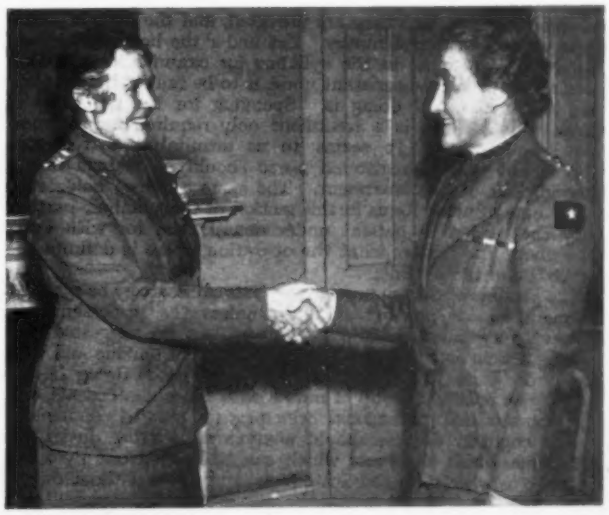
Much discussion centred round the question whether the assistant nurse should have experience in the nursing of children. Professor Ralph Picken pointed out that, if the assistant nurse went into the infectious hospital, she would meet sick children there. Miss F. M. Campbell replied that the infectious hospitals could not accommodate all the assistant nurse trainees, and some must, therefore, not get this experience.

Professor Picken then raised the important suggestion that if assistant nurses were to be allowed to train in infectious diseases hospitals, in which the work was essentially acute work, why should not the assistant nurse be trained also in the small general hospital. Miss E. E. P. MacManus replied that the assistant nurse was essentially for the nursing of the chronic sick, and that it was important that she had a thorough training in that type of nursing. She suggested that the small general hospital would not have the machinery for the training of the assistant nurse: We presume she was referring to the necessary teaching equipment and personnel. In actual fact does not the small general hospital compare favourably with the average institution for the chronic sick in nursing equipment and teaching standards?

All these discussions show how difficult the problem is: and from other sources we hear the suggestion that it may prove difficult to recruit in sufficient numbers for the assistant nurse, if her training is only to be carried out in hospitals for the chronic sick, fever hospitals and sanatoria—the fields of nursing where shortage of recruits has always been the most acute, though this has not been the experience of Essex County Council, which has experience in this matter.

It would almost appear that the training of the assistant nurse was being designed to meet the shortage of candidates, rather than to prepare the candidate for the type of work which the assistant nurse ought to do, and in this connection the syllabus for examination also fills us with some misgiving. The syllabus ought not to be determined on what the assistant nurse does to-day in the wards of the institutions for the care of the chronic sick, many of which, we all know, leave a great deal to be desired in the accommodation that they offer for patients and staff, the

Welcome to Whitehall! Dame Katharine Jones, D.B.E., R.R.C., matron-in-chief, Queen Alexandra's Imperial Military Nursing Service, greets her successor, Mrs. L. J. Wilkinson, O.B.E., R.R.C.



Nursing in Normandy. Left: *the Q.A.s settle down for the night in a slit trench* Below: *after operation, R.A.M.C. orderl.es carry out the patient under the supervision of a Q.A.*

Topical Notes

In England Now

Our sympathies go out to all nurses on the English front who, at hospitals in Southern England, often short of sleep, perhaps mourning the loss of their friends, carry on, caring for the flying-bomb casualties, in addition to a full-time job; the folly of the public in sky-gazing is adding considerably to the work of the hospitals. The toll of damage to hospitals and the deaths of the nursing staff, including some young girls in training, continues, alas, to increase. Saddest incident of all is, perhaps, that of a nursery in the heart of the country which received a direct hit. Babies aged from three months to two years lost their lives, together with some of the nursing staff. Mercifully the babies were asleep in their cots when the crash came. Fatal casualties are low.

French Without Tears

Letters from the Normandy 'ladies,' who are now some miles inland, have begun to come through, and many Q.A's have a tale to tell. One night the unit slept on stretchers in a field, but now, of course, the hospital is organized, although, for safety's sake, they sleep in slit trenches. All speak of the universal kindness and welcome which they have received. In charge of the unit is Miss (Major) J. E. Mellor, trained at St. Bartholomew's Hospital, whose nursing adventures include a period at Gibraltar during the Spanish Civil War and nursing in France during the early days of this war; she left St. Nazaire in one of the last ships. Subsequently she was matron of a large hospital in Nigeria. Testimony to the care given to casualties at the front line is the report of Major-General A. W. Kenner, United States Army chief medical officer, S.H.A.E.F., who, commenting on a visit to a general hospital in England, stated that of 561 wounded, mostly invasion day casualties, not a single death had occurred. This record is, too, in spite of the fact that 'Fibrous splinters were found in some of the wounds which doctors believed to be particles of wooden bullets.'

Banishing a Bogey

The medical officer of health for Lowestoft, Dr. V. R. Walker, discloses in a recent report that, in a certain school in his area, the only child who contracted diphtheria during the previous year was one who had not been immunized; also that 80 per cent. of the school children and 75 per cent. of children under school age in the district had received immunization. A good total and a sign that the never-ceasing work of district nurses and health visitors is beginning to bear fruit. Nevertheless, as the

(Continued from previous page)

equipment with which they are provided, and the ratio of State-registered to untrained nurses. Yet under the heading 'Special Nursing Procedures,' in the syllabus for examination the first item about which the assistant nurse is to be taught the preparation and method of doing is, 'Sponging for the reduction of temperature.' This is a treatment only required for the most acute, 'acute cases.' It seems to us unsuitable that anyone who is not a State-registered nurse should be trained in the carrying out of this treatment. The same criticism holds good in the case of other items in this section of the syllabus, particularly the care of a patient under anaesthesia, for with every anaesthetic, no matter what the operation, there is definite risk to the life of the patient.

The prestige of British nursing overseas can scarcely be expected to maintain its pre-war standard unless the profession goes forward very carefully in this matter. As we suggested in a leading article on the analysis and allocation of nursing and ward duties on June 10, a vital piece of work needs doing in this country at once: a group of nurses with the highest ideals, who will not sacrifice professional principles for present convenience in the slightest degree, should analyze all nursing duties and determine which are those which can be carried out by a less-qualified worker than the State-registered nurse without danger to the patient. In doing this the nurses responsible should keep in mind the common causes of accidental death and injury to patients in the course of nursing work, particularly the deaths which occur, or are threatened, when nurses incapable of simple arithmetical calculations are permitted to administer dangerous drugs, the cases of obstructed respiration after anaesthesia, the cases of burns by hot bottles or other equipment in unconscious patients. The nursing profession has a duty here to the ultimate good of the patient of the future rather than to institutions of to-day, however desperate these may be for the staff. Rather let us delay the implementation of the Nurses Act, 1943, than sacrifice ultimate standards to present convenience.

following story indicates, there is much educational work to be done on the subject of immunity generally. A girl, aged about 17 years, came recently to a works' surgery to report a sore throat and temperature, afraid that she was sickening for typhoid fever. On sister's enquiry for the reason of her fear, she replied, 'Well you see, my boy friend was injected with that yesterday.' *Voila tout!*

A New Appointment

DAME Doris Beale, D.B.E., R.R.C., with bar, will have served nearly three years as matron-in-chief of Queen Alexandra's Royal Naval Nursing Service when she completes her tenure of office on July 14. Since September 1941, she has worked hard and successfully in the service of the Navy, and we wish her every happiness on her retirement. Her successor, Miss Matilda Goodrich, R.R.C. with bar, a trainee of Derbyshire Royal Infirmary, served with the Q.A.R.N.N.S.R. in a hospital ship during the 1914-18 war, joining the regular service in 1920. She has worked in naval hospitals in Britain and Hong-Kong and received the R.R.C. at the same time as Dame Doris Beale, in the Birthday Honours of 1941. All nurses will wish her equal success in her new post as matron-in-chief of the naval nurses.

Public Health Nurses for UNRRA

DR. Andrew Topping, Director of Health for the European Region of UNRRA, has set up a small committee of representative members of the nursing profession to help him to deal with the problems of the demand for nurses for relief work in the territories of Europe as they are liberated. The committee consists of Mrs. B. A. Bennett, chief nursing officer, Ministry of Labour; Miss R. Dreyer, acting matron-in-chief, London County Council; Miss F. Goodall, O.B.E., general secretary, Royal College of Nursing; Miss E. E. P. MacManus, O.B.E., matron, Guy's Hospital; Miss A. Sayle, Women's Public Health Association; Miss K. C. Watt, chief nursing officer, Ministry of Health; and Miss M. Wilmshurst, O.B.E., general superintendent, Queen's Institute of District Nursing. The committee deals with terms and conditions of service, in addition to applications for employment as nurses with UNRRA. The committee has met three times, and the following interesting appointments, already known to a wide circle, are now made public: Miss O. Baggallay, M.B.E., LL.B. S.R.N., becomes chief nursing consultant for relief work in Greece; Miss E. le L. Alden and Miss C. M. Grant Glass have been selected for other leading positions.

Experienced Candidates

MISS Baggallay is already well known to members of the nursing profession here and overseas. A trainee of St. Thomas's Hospital, she specialized in public health work and became secretary of the Florence Nightingale International Foundation, living at 15, Manchester Square, W.1., making contacts with international students from every country in Europe and every part of the world, and assisting them in their studies for the public health and hospital administration courses. She was selected to go to Finland in 1940 by the Finnish Fund, and, since that time, served as woman inspector to the Ministry of Health in the Bristol region until recently, when she returned to London to work for the Florence Nightingale International Foundation again. Miss Alden is a trainee of University College Hospital, who has also spent her nursing career in the public health services. She is also a woman inspector to the Ministry of Health, and has been working in the Cambridge region. Miss Grant Glass is a trainee of the Royal Infirmary, Edinburgh, and has been a welfare officer of the Ministry of Labour since 1941, in the Midlands. Other similar offices have been and are being filled by nurses from the United States, Canada and other countries, and the nurses will proceed shortly to the Middle East, as already there is health work and teaching to be done in the large refugee camps established there.

THIS WEEK

The syllabus of subjects for examination for admission to the Roll of Assistant Nurses is made public : see page 472

A 'General Wingate' Ward

THE Princess Tsahai Memorial Hospital at Addis Ababa is to contain a ward in memory of Major-General Orde Wingate. Mr. Winant, the American Ambassador, Lord Horder and Miss Sylvia Pankhurst spoke recently to a large gathering at the Dorchester assembled to launch the fund. Before his death in a flying accident in Burma, General Wingate had been commander-in-chief of the small Ethiopian army which, with 100 British officers, successfully vanquished the large and heavily equipped army of occupation. Already the fund for the hospital with a target of £100,000 contains £10,000 raised in Addis Ababa and £13,000 collected here; the Emperor proposes to use the whole of the Princess's trust fund left by her in this country. The Princess Tsahai Memorial Hospital Council has suffered a great loss in the recent death of its chairman, Lord Davies, but plans are forging ahead. All nurses will, we feel, be proud to have this hospital in memory of such a charming and distinguished member of their profession, associated with General Wingate. There is also a fund for a ward in memory of Doctor John Melly who was killed in Ethiopia while working there with his Red Cross Unit. Donations should go to Lord Horder, Honorary Treasurer, Princess Tsahai Memorial Hospital, Wingate Ward, c/o Messrs. H. Reynolds, Honorary Chartered Accountants, 1, Bloomsbury Court, High Holborn, W.C.1. Information and leaflets may be obtained from Miss Sylvia Pankhurst, *New Times and Ethiopia News*, 3, Charteris Road, Woodford Green, Essex.

The Future Race

AMONG the many messages the National Baby Council received during National Baby Week was one from Mr. H. Willink, Minister of Health. He quoted the Prime Minister's words: "The care of the young and the establishment of sound hygienic conditions of motherhood have a bearing upon the whole future of the race which is absolutely vital." The country, Mr. Willink said, looked to mothers to take all the available foods for themselves and their babies, to the midwives and maternity nurses to guard, help and encourage mothers to feed their babies, and to health visitors and other workers to watch over the children. When so much is being destroyed there is an urgency in work of every kind which is surely intensified amongst nurses and midwives?

INFECTIVE HEPATITIS*

By ARTHUR A. LISNEY, M.A., M.D., D.P.H., Deputy County Medical Officer of Health and Deputy School Medical Officer, Leicestershire County Council

ALTHOUGH epidemics of jaundice have been recorded since ancient times in practically every part of the world, no attempt to describe the disease can be traced before 1886, when Weil published an account of the symptoms in a number of severe cases. Later, in 1912, Dr. E. A. Cockayne published an article distinguishing between the original more severe form, known as Weil's disease, and a milder form which he named 'epidemic catarrhal jaundice.'

At that time the causal organism of either type was not known, but, in 1915, two Japanese scientists discovered that Weil's disease was due to a spirochaete, the *leptospira icterohaemorrhagiae*. Fortunately this disease is relatively uncommon in Great Britain; up to the present time not more than two hundred definite cases have been reported, although undoubtedly others occurred before records were kept, but were unrecognized owing to the lack of knowledge of the disease. Rats were almost invariably the direct or indirect source of infection in man.

Since Cockayne described his cases of 'epidemic catarrhal jaundice' many attempts have been made to isolate the causal organism, which is now believed to be an ultra-microscopic virus, though no proof is available. Many investigators have tried to sub-divide the disease into several types, but as all have the same epidemiological behaviour it is more than likely that there is a common causal agent. As the disease is infective and as hepatitis undoubtedly occurs in the majority of cases, it is now commonly called infective hepatitis.

Aetiology

Mode of Infection.—There is no definite evidence that the disease is spread by such agencies as milk, water, food, or vermin; nor does it appear that infection is carried by the clothing of infected persons or of those coming in contact with them. The conclusion is, therefore, that personal contact is the chief factor causing the spread of the disease, probably by means of droplet infection transmitted by speaking, sneezing and coughing. In epidemics it is usually easy to trace the spread of infection from case to case. Occasionally there is a gap in the chain which can be explained by the fact that mild or sub-clinical cases occur without any jaundice being apparent, such cases being very easily missed. The appearance of isolated cases at the same time as outbreaks of infection in neighbouring areas gives reason to believe that infection may also be spread by means of carriers.

Attacks of jaundice, with symptoms closely resembling infective hepatitis, have been recorded following inoculation against yellow fever and measles, and following injections of organic compounds of arsenic in the treatment of syphilis. It is not yet known if these attacks are due to the same organism as that causing infective hepatitis, but it is very likely that this is the case. Either a toxic substance is present in the material injected, which lowers the resistance of the patient to the virus, thus predisposing to an attack of infective hepatitis, or the virus itself is present in the material injected.

Incubation Period.—The incubation period varies between twenty-six and thirty-five days.

Period of Infectivity.—This cannot be so easily defined, but the patient is probably infectious for at least one week before the appearance of jaundice, after which infectivity apparently ceases.

Incidence

Infective hepatitis occurs both in epidemic and sporadic form, and the problem is further complicated by the absence of jaundice in a number of cases.

Seasonal Incidence.—The majority of epidemics begin in the autumn, the cases gradually increasing in number until a peak is reached about December, after which the incidence decreases until the epidemic finally fades away in the late spring or early summer. Occasionally cases continue to occur during the summer and another peak is reached in the second winter. An epidemic is usually made up of a number of local outbreaks, often scattered over quite a large area, and although they may appear to be isolated with no obvious relationship between them, careful investigation will usually disclose some connecting link. Dissemination of infection is assisted by children attending central schools or by the transportation of factory workers from widely scattered areas. The incidence of the disease has been higher during the war, probably because the daily movement of the population is greater than in peace-time.

Two Types of Outbreak

There are two distinct types of local outbreak in town or village—one in which a number of cases occurs within a short period of time, and another in which the incidence extends over a much longer period. The latter type is more commonly met with than the former. These characteristics are well illustrated in Graphs 1 and 2, which represent actual epidemics investigated by the writer. In Graph 1, eighty-four cases occurred in a small village within a period of six weeks, while, in Graph 2, a village with approximately the same population, had thirty cases spread over eleven months. This difference in the attack rate can probably be explained by a fluctuation in the degree of immunity, or a variation in the avidity of the infective agent.

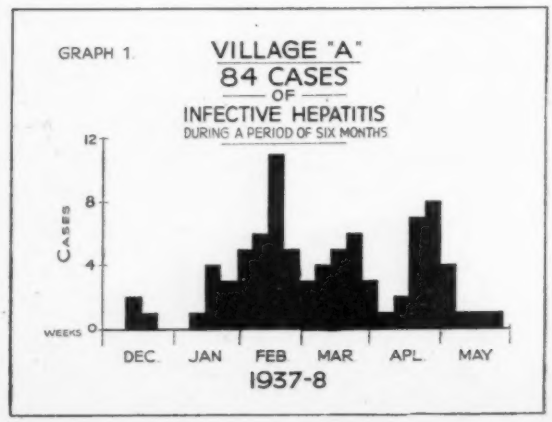
Higher Among Children

Age-Sex Incidence.—There is no characteristic sex incidence, both sexes being about equally affected in most epidemics. As regards the age incidence there is invariably a much higher attack rate among children between the ages of five and fifteen than in other age groups.

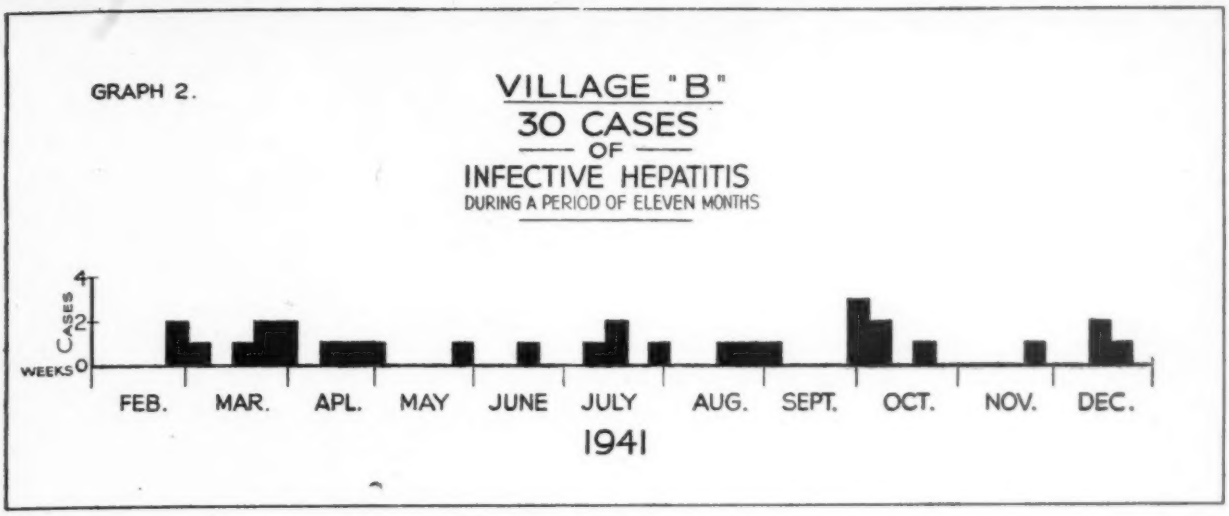
Clinical Features

The severity of the disease varies considerably and usually adults are more severely attacked than children. In a case of moderate severity the disease runs a characteristic course; the onset is gradual and, for several days before definite symptoms develop, the patient complains of general malaise, headache, anorexia and, perhaps, nausea. It is difficult to diagnose infective hepatitis at this stage unless other cases have already occurred in the family or among personal contacts. Sometimes the prodromata are complicated by the presence of sore throat or coryza, and the condition of the patient is often similar to that found during the onset of some forms of influenza. Very shortly after the onset, however, pain in the upper abdomen occurs and is usually accompanied by vomiting, both symptoms lasting for one or two days. The pain gradually passes off, but tenderness in the epigastrium may persist for several days after the other symptoms have subsided. It is at this stage that enlargement of

Graph 1



Based on a lecture given to Leicester Branch of the Royal College of Nursing



Graph II

he liver is first detected in some cases, and more rarely enlargement of the spleen.

From four to seven days after the acute symptoms develop jaundice appears, usually starting in the conjunctivae and spreading over the face, neck, arms, trunk and lower limbs. At the same time the faeces become pale, due to the absence of normal bile pigments, and the urine dark, due to the abnormal presence of these pigments. Not infrequently the urine contains bile shortly before the first traces of jaundice can be detected. In two to four days the jaundice attains its maximum intensity, and usually lasts from about seven to ten days. Where jaundice has been widespread and deep in colour itching frequently occurs. Recovery is usually slow and convalescence is complete in two to four weeks, but may take longer.

Summary of the Stages of Infective Hepatitis

1. Incubation period : 26-35 days	
2. Premonitory stage : Prodromata* 1-3 days	Headache, malaise, anorexia, nausea, slight temperature. Rarely sore throat or coryza.
3. Acute stage : 1-2 days*	Abdominal pain, vomiting.
4. Intermediate stage : 1-4 days ...	Epigastric tenderness. Occasionally enlargement of liver and more rarely spleen. Sometimes rash— urticarial, morbilliform, petechial.
5. Period of jaundice : 7-10 days ...	Faeces pale, urine dark, jaundice of varying distribution. Very occasionally rash, usually urticarial, after appearance of jaundice.
6. Convalescence stage : 2—4 weeks.	

* *Period of infectivity : at least one week before jaundice appears.*

In most, if not all, epidemics of infective hepatitis there is a sprinkling of severe cases in which all the signs and symptoms described above are exaggerated. Abdominal pain and vomiting may be so severe as to simulate an 'acute abdomen.' The jaundice too, in severe cases, is much more intense and persists longer than usual; convalescence is also more protracted. Mild or sub-clinical cases are, on the other hand, much more common; in some outbreaks the mild cases predominate and, although the urine in these cases contains bile, often no jaundice can be detected. The appearance of jaundice is only one symptom of infective hepatitis, a symptom which is undoubtedly absent more often than is generally appreciated. As is to be expected, mild cases are often missed altogether as the doctor or district nurse is not always consulted. So-called mild influenza or gastric disturbances are no doubt sometimes infective hepatitis in its abortive form, without jaundice.

Differential Diagnosis

In any epidemic where jaundice is the chief symptom it is important to exclude Weil's disease as soon as possible. This can be done by sending a specimen of blood or urine to the laboratory. Here a centrifugal deposit of the specimen is injected into a guinea-pig which, if the infection is Weil's disease, develops jaundice and dies in about ten days after inoculation. The spirochaete can be isolated from the kidneys, adrenals and liver of the dead animal.

Gastric disturbances, such as gastritis, acidosis, bilious attacks and gastric influenza should be suspect of being abortive infective hepatitis, or an outbreak of this disease in the early stages, before actual cases of jaundice have occurred. In such cases examination of specimens of urine for bile should be made, and if this pigment is present the diagnosis is infective hepatitis.

The following table gives the chief clinical differences between Weil's disease and infective hepatitis, and is reproduced by permission from Harries and Mitman, 'Clinical Practice in Infectious Diseases,' 1944 :—

Weil's Disease.	Infective Hepatic Jaundice.
Incubation : 7-13 days.	Incubation : 26 to 35 days.
Severe.	Benign.
Haemorrhages—e.g., epistaxis and petechiae constantly present.	Occasionally slight epistaxis at onset. Haematuria in some.
Sudden, severe onset, rigors, great prostration, injected conjunctivae.	Onset gradual and benign. Conjunctivae frequently injected.
Liver enlarged.	Liver seldom palpable.
Frontal headache, twitchings, convulsions, tenderness of muscles.	Very slight headache. Marked nervous symptoms exceptional.
Initial fever of 102° to 104° and marked secondary fever.	Initial fever seldom more than 102°, and usually no secondary fever.
Jaundice appears on fourth or fifth day. Increases in intensity up to tenth day. Lasts about three weeks.	Jaundice appears on fourth to seventh day. Reaches maximum in two to four days. May last three weeks, but usually disappears in a week.
Blood : leucocytosis with absolute and relative polymorphocytosis.	Blood : neutrophiles decreased, small lymphocytes increased.

It is unlikely that the various types of jaundice occurring in infants would be confused with infective hepatitis, and acute and sub-acute yellow atrophy of the liver are so rare that they need hardly be considered. It is worth noting, however, that the suggestion has been made that these latter conditions and infective

SUGGESTED SYLLABUS OF SUBJECTS OF EXAMINATION FOR ADMISSION TO THE ROLL OF ASSISTANT NURSES

Approved by the General Nursing Council for England and Wales but awaiting the approval of the Minister of Health

Preface to the Syllabus of Subjects of Examination for Assistant Nurses

Duration of Training.—It is intended that the training of pupil assistant nurses shall be of two years' duration, and shall include the nursing of both sexes. A minimum period of one year must be spent in the nursing of the chronic sick.

During the two years' training a period not exceeding one year may be spent in a hospital for infectious diseases and/or in a hospital or sanatorium for the treatment of pulmonary tuberculosis.

Preliminary Training School or Centre.—It is essential that all pupil assistant nurses should receive some preliminary instruction. A minimum period of four consecutive weeks, or two periods of two weeks each, must be spent in a preliminary training school or centre.

Subjects of Examination.—The subjects of examination are set out in the draft syllabus.

IT IS INTENDED ALL SUBJECTS SHOULD BE TAUGHT IN A SIMPLE AND ESSENTIALLY PRACTICAL MANNER

SYNOPSIS

Part I. Introduction ... ...

Part II. Body structure and functions in health. Elementary hygiene. The laws of healthy living. The maintenance of health ... ...

Part III. First aid ... ...

Part IV. General Nursing: Care of patients. Routine nursing procedures. Handling of equipment ... ...

Part V. The nursing duties and attention required during illness. The main features of disease ... ...

Part VI. Special subjects. Applicable only to those pupils who spend part of the period of training in a sanatorium or infectious diseases hospital: (*a*) nursing and care of patients suffering from pulmonary tuberculosis; (*b*) nursing and care of patients suffering from infectious diseases ... ...

DETAILED SYLLABUS

PART I

Introduction

(1) A short review of the value of nursing and its place in the community.

(2) The qualities nursing requires in a recruit and advice as to the management of her life as a nurse.

(3) The nurse's responsibilities towards individuals and property.

(4) The patient as an individual and the effect of illness on behaviour.

(5) The general plan of a hospital; the care of property and equipment.

PART II

Body Structure and Functions in Health; Elementary Hygiene; The Laws of Healthy Living; The Maintenance of Health.

An elementary knowledge of :—

(1) The structure of the human body.

(2) The functions of the body, applied to the normal.

(3) *Nutrition.* The purpose of food. Types of food and accessory food factors. Preparation and serving of food. Principles and methods of simple cookery.

(4) *Hygiene.* The laws of healthy living as these affect the individual and the community, and are applied to the home. The maintenance of health. The importance of promoting good health. The factors which cause deterioration in health and how these may be dealt with by the individual, in the family and in the community.

PART III

First Aid

The principles and practice of first aid in the street, the home and the hospital.

PART IV

General Nursing: (1) Care of Patients; (2) Routine Nursing Procedures; (3) Handling of Equipment.

Equipment.—Handling and care of equipment in common use, including bed accessories and utensils.

Routine nursing procedures.—Preparation of beds and cots. Positions used in nursing. Admission of patients. Immersion and blanket bathing. Care of mouth, skin, hair, nails, hands and feet. The treatment of verminous patients. The giving and removal of sanitary utensils. Care of helpless and incontinent patients. Prevention of bedsores. Temperature taking and charting. Serving meals and feeding helpless patients. Care of the ambulant patient. Transfer and discharge of patients. Ambulance duties. Medicine measures. Care and custody of medicines. Giving medicines. Giving hypodermic injections. Safe custody of poisons. Preparation of lotions in common use. Observations and disposal of urine, faeces, sputum and vomit. Collection of specimens. Simple urine tests. Giving and receiving reports. Writing ward reports. Duties of night nurse.

Special nursing procedures.—Preparation for and method of carrying out the following: Sponging patient for reduction of temperature. Swabbing and bathing eye. Examination of throat (preparation only). Application of ice-bag, compresses, fomentations, poultices, liniments and ointments. Application of strapping, elastoplast and simple splints. Application of plaster of Paris (preparation only). Administration of oxygen, and of dry and moist inhalations. Use of steam kettle and steam tent. Examination of vagina and rectum (preparation only). Insertion of pessaries and suppositories. Swabbing and douching vagina. Giving enemas and rectal washouts. Giving saline and glucose by rectum. Passing a flatus tube. The use and care of common surgical appliances.

Surgical cleanliness and surgical nursing care.—Asepsis and antisepsis. Sterilization of articles in common use. Scrubbing up. Disinfectants in common use. Disinfection. Preparation for surgical dressings. Performing simple dressings. Preparation of patients for a general anaesthetic. Care of a patient recovering from an anaesthetic.

Emergencies.—Procedure in case of accidents in the ward.

Religious ministrations.—Sending for the clergy. Preparation for services. Care of the dying and last offices. Disposal of patient's property after death.

PART V

The Nursing Duties and Attention Required During Illness—The Main Features of Disease

Introduction.—The characteristics of the body in health. The factors which contribute to or cause ill health. The importance of the early recognition of the signs and symptoms of disease.

Infection.—Cause. Predisposing factors. Modes of transmission of infection. Incubation periods and symptoms of onset of the commoner infections.

Diseases of Social Importance.—Information the community should have in regard to tuberculosis, venereal disease and cancer.

Immunization.—How immunity is acquired. Information parents should have regarding the protection of their children against the diseases for which artificial immunization is available.

Nursing Care in Disease.—The symptoms and signs met with in diseases and disorders which commonly affect the various systems of the body and the nurse's duties as regards nursing care and observation. General care of the comfort of patients. Prevention of bedsores. The importance of providing occupation and of getting patients up. Special aspects of disease in old age and in the chronically ill.

Nursing Care of Sick Children.—The symptoms and signs of minor ailments and the common infections of childhood. Routine nursing care and observation. Bathing, feeding, clothing and the importance of habit training of infants and children.

PART VI a

Nursing and Care of Patients Suffering from Pulmonary Tuberculosis*

Introduction.—The dangers to the community of tuberculosis. The functions of tuberculosis centres and sanatoria in the control of the disease.

Infection.—The tubercle bacillus. Modes of transmission of tuberculosis. Sources of infection. Primary and re-infection. Factors predisposing to pulmonary tuberculosis. Means of detecting early cases. Factors contributing to resistance to tuberculosis.

The general plan of a sanatorium.—The routine of life in a sanatorium, and the precautions taken to prevent the spread of infection and to control the disease.

Pulmonary tuberculosis.—The modes of onset and characteristics. Other forms of tuberculosis. Complications. General nursing care. The different types of treatment carried out in a sanatorium, including surgical lung treatment. The after-care of cases of tuberculosis.

(**Applicable only to those pupils who spend part of the period of training in a sanatorium.*)

PART VI b

Nursing and Care of Patients Suffering from Infectious Diseases**

Introduction.—The characteristics of infectious disease. Preventive measures and their application. Special tests and immunization. Safeguarding the health of the nurse.

Infection.—Modes of transmission of infectious disease, sources of infection and predisposing factors.

Immunity (see also Part V, paragraph 4). Factors concerned in resistance to infection.

The general plan of the fever hospital.—The function of the hospital in the control of infectious disease. Methods of isolation. Means taken to prevent infection and cross infection.

The commoner infectious diseases.—Their incubation periods, symptoms of onset, course and complications. The general nursing care of patients with infectious disease and methods of dealing with emergencies which may arise.

Discharge of patients from a fever hospital.—Ambulance duties.

(***Applicable only to those pupils who spend part of the period of training in an infectious diseases hospital.*)

Correspondence

The Coat of Arms

If you have the space, may I implement the few remarks I made at the annual meeting with reference to the coat-of-arms? As the result of my appeal to the branches at the annual meeting in 1943 for funds to obtain a coat-of-arms for the College, 57 out of 117 branches most kindly responded and sent me sufficient funds to pay the fees of the College of Heralds. The Council appointed a sub-committee to suggest to the College of Heralds for its approval a form of arms which, I believe, the College of Heralds will receive sympathetically. This sub-committee, of which I was not a member since I am not a member of the College, met several times, assisted by suggestions sent in by the prize competition kindly originated by the *Nursing Times*, with the result that a design was chosen of which the members who were able to be present at the annual meeting expressed great approval.

Treasurers are peculiar people who never appear to be satisfied, but who are continually appealing for funds. Now, while I realize that the most important duty of your honorary treasurers is to do all in their power to keep the College accounts on the 'right side,' which must entail an increasing membership and a continuation of the profits of the *Nursing Times*, nevertheless I am most anxious that the College should be granted a coat-of-arms, in view of the dignity of its position in the nursing world. Therefore, although I have got beyond the stage of blushing, I feel almost a blush coming to my face as I make the following proposal—namely, that the remaining 60 branches might feel inclined to 'round off' in its entirety my original suggestion. This entails two propositions.

The first is that the coat-of-arms should include the Royal Crown, which the Council thinks should be included since the College is a Royal College. This would entail an additional fee to the College of Heralds of £50. The second is that, although the College of Heralds will supply to the College of Nursing a beautifully inscribed coat-of-arms signed by the Duke of Norfolk and the Garter King of Arms, this is a comparatively small document which will have to be framed and hung wherever the Council decides, perhaps in the office of the General Secretary. However, as in other Royal Colleges, there should be a large representation of the College arms to be hung where the Council decides, and I think a very appropriate place would be the centre panel of the wall of the Cowdray Hall, behind the platform. I have no idea of the cost of such a representation, but it would not be cheap.

Lastly, do not forget that the coat-of-arms must have a motto. The choice will be difficult and our new president suggested to the members present that they, and other members, might send in their ideas for the Council to make a choice. Donations should be sent to Miss Barrett, the Financial Secretary, Royal College of Nursing.

COMYNS BERKELEY,
(M.C., M.D., F.R.C.P., F.R.C.S., F.C.O.G., Honorary Treasurer of the Royal College of Nursing).

[*At present the Royal College of Nursing has not received permission to use the Royal Crown in the new coat of arms. As soon as information reaches Headquarters we will publish the fact in the Nursing Times.—Ed.*]

Good Reading

I should like to say a few words in appreciation of the *Nursing Times* excellent "Book Reviews." To give two examples of most interesting books brought to my notice by your reviews I would instance *The Little Locksmith* and *Human Reproduction and Venereal Disease*.

The first is charming and we suffer a great literary loss in the death of its courageous authoress; the second is the most forthright and understanding treatise on these subjects that I have yet read.

The author's attitude to human weaknesses and foibles is refreshing. He sympathizes with, but does not pander to, them. His book is an instruction and a challenge to our whole community and should be 'read, marked, learned and inwardly digested' by every citizen.

Yours faithfully,
COLLEGE MEMBER No. 61148.

Left or Right?

In reference to a photograph published in *Nursing Times* of June 17, supplement ix, as a student nurse I was taught, and as a ward sister have always endeavoured to teach my nurses that:—(1) All clinical routine should be carried out from the right-hand side of the bed, unless the nurse is left handed. (2) A child's temperature should be taken in groin or axilla. (3) Both hands are needed. (4) A tray with a supply of clean swabs and a receptacle for used ones is required as well as a thermometer.

I.E.H.
S.R.N., S.R.C.N.

[*We consider that clinical routine should be carried out from whichever side is most convenient. Only thus will it be done with the greatest ease to the patient. The patient in the picture is a dummy, and not a child, but even for the child there are different schools of thought. The tray with clean and used swabs is surely on the locker out of view.*—ED.]

In Parliament

Recently in the House of Commons, **Sir Robert Gower** asked the Minister of Health what wages were paid, respectively, to the nurses employed in the first-aid post services and to ordinary hospital or public health nurses; and what was the reason for the differentiation.

Mr. Willink replied that the First Aid Post Service nursing auxiliaries were paid at the same rate as women in other Civil Defence (General) Services (of which the First Aid Post Service was part), namely, £2 15s. weekly, with additional service pay for completed years of service, and trained nurses were paid at the rate of approximately £3 14s. 1d. weekly. It was not practicable to set out within the scope of a Parliamentary answer the various rates of pay prevailing in the hospital and public health services for nurses of the various grades; but they were set out in the First and Second Reports of the Nurses' Salaries Committee (Cmd. 6424 and Cmd. 6487), and, so far as members of the Civil Nursing Reserve were concerned, in the memorandum setting out the conditions and terms of service of the Reserve. The rates of pay in the First Aid Post Service, which were kept under regular review, were determined in the light of the general conditions prevailing in the Civil Defence (General) Services. These conditions differed substantially from those of nurses in the other services mentioned.

BONJOUR MONSIEUR!

WHEN H.M. The Queen visited a military hospital, she spoke in French to two natives of Normandy.

MORE NURSING RECONSTRUCTION ESSAYS

From the 'Nursing Times' Competition

By AGNES WALSH, Rochdale Infirmary, Lancashire

THE proposed student status for nurses, with payment of fees during training, is unwise, as it would lead to that dreadful state of affairs—class distinction. Many families will be impoverished owing to the war, and only the wealthier amongst us will have entry into the profession. Many of those with a true vocation will be deterred from training owing to lack of means. I doubt whether sufficient scholarships would be available, despite their appealing sound!

Nurses do not object to those 'domestic' duties which are necessary for the preservation of strict cleanliness and asepsis in a ward, and, furthermore, would not be capable of teaching others later, if not trained in these things. But the heavier work—sweeping and polishing floors and brasses—and that bogey, 'the blackout,' could with advantage to the patient and nurse be left to domestic workers and orderlies.

The adoption of a national scheme for the provision of *well-paid* domestics in hospitals is all that is necessary to give the nurse her student status. Whatever anomalies the Rushcliffe scheme holds for trained staffs, it certainly provides improved conditions for student nurses.

A central governing body of nurses could, with advantage, be instituted, all nurses to come under its jurisdiction. Hospital authorities and nurses, trained and in training, could have equal right of appeal. This would be a much fairer system of government than the reigning rule whereby a nurse is employed by a committee with which she never comes into contact.

It would need the pen of Karel Capek to illuminate the subject of 'home' restrictions in hospitals, but really one or two common-sense solutions would do much to create a happy atmosphere. Nurses would be eternally grateful if the 10 p.m. ban were lifted and late passes issued for 10.30 or 11 p.m. twice a week. They appreciate the sense of responsibility which went to the creation of rules that protect the nurse while they restrict, but nurses over twenty-one years of age would appreciate the implied trust.

An 'honour' system whereby a known penalty is exacted of the individual rule-breaker would abolish the mortifying spectacle of personal recriminations which spoil the family atmosphere.

We appreciate the fact of having our two-hour off-duty spell unspoiled by lectures, but ward routine and care of patients is hindered when nurses go to lectures at the busiest hour. The block system will remedy this state of affairs.

We would be grateful for daily discussion about the patients in the ward and for bedside clinics. Actual cases are so much better than a paragraph in a text-book! For the sake of suffering patients and valiant night nurses, we would like to see a law passed to the effect that there should be *two* night nurses in a ward of over twenty-four beds. The psychological effect on the patients is amazing.

Standardization of training is very necessary; also the regular inspection of all hospitals by the General Nursing Council.

More personal encouragement and interest from the senior members of the staff towards the junior would be a wonderful incentive to new nurses. Criticism with faith and trust behind it will build, but condemnatory criticism kills.

By Miss K. CLARK

THE problem of nursing reconstruction would seem to be mainly a psychological one in that the public's mind, always slow to assimilate new ideas, still looks at nursing through spectacles fifty years old. The horrors which Florence Nightingale had to face are probably better known than the romance of treatment for modern tuberculosis.

The average girl simply does not know what constitutes a nursing career, and only the hardier spirits dare plunge into an unknown world.

Nursing is looked upon as a closed community life. Every young, ambitious girl has a healthy fear of getting into a rut, of giving up that new-found freedom which is to her the essence of life. That the rigid discipline which she abhors will produce the meticulous care necessary for saving life escapes her, and she will not willingly give up privileges without knowing the reasons.

The call for a wider health education by lectures and films is, too, increasingly apparent. The average person has a morbid fear of illness, although this is slowly dying as science advances, and, gradually, satisfied patients will form an army of propagandists.

It is up to every nurse to keep her high ideals before her and translate them into action in the interests of her patients. One mother I know, whose life was saved, told me she resolved before her children were born to dedicate them to the medical profession. Today there are three nurses and a doctor in that family.

There is at the present time a great need for enlightened teaching in senior and secondary schools. Nurses should visit them to give to school girls some account of a nurse's work, and parties of interested school girls should be given an opportunity to see her on nursing duties. The fact that nursing is many-sided and offers promotion and training in many branches should also be stressed in the schools, for the call to adventure is always a strong one with the adolescent.

When the new Education Act makes schooling compulsory up to sixteen years, there will be a great chance for pre-nursing training in the new vocational schools. The time-lag between the time when the average girl leaves school and the time she is able to enter hospital, has an appreciable effect on the number who volunteer for nursing. In those two or three years the pull of wages and an unrestricted social life have influenced her in other directions.

Possibly a scheme whereby more theoretical training is done before entry into hospital will give us nurses more time to link up our job with wider social contacts; and as nurses take part in the world of affairs, people will wake up to the fact that the nursing profession is an essential section of the community, within whose numbers they will be proud to count their own daughters.

Book Reviews

MEDICAL HANDBOOK FOR NURSES—*By I. Stewart, S.R.N. (Faber and Faber, 24, Russell Square, W.C.1; price 8s. 6d.)*

It is a difficult but interesting task to combine the theoretical and practical aspects of medicine in one small handbook for nurses at this modest price. Miss Stewart has done it well, and the book is a most useful addition to the nurse's library. Of course, the medical detail is not sufficient for the nurse to dispense with a textbook on medicine, nor is the nursing detail as full as it might be. For example, in tepid sponging, exact instructions are needed as to what degree of reduction of temperature is desirable. Also in the description of the oxygen chamber it seems that the pattern described is one used in Glasgow only, and nurses will want to understand the ordinary patterns of oxygen tents in common use. It is misleading to describe hot air and vapour baths in the chapter on pyrexia. The author has, however, correlated the practice of nursing medical cases with the theory in a very practical way, and this sixth edition can be thoroughly recommended. It will no doubt prove as successful as its forerunners.

TEXTBOOK OF ANATOMY AND PHYSIOLOGY FOR NURSES—*By C. C. Francis, A.B., M.D., G. Clinton Knowlton, Ph.D., and W. W. Tuttle, Ph.D. (Henry Kimpton, 26, Bloomsbury Way, W.C.1; price 18s.)*

This is a book to be recommended to nurses studying anatomy and physiology up to the diploma standard. The subject matter is detailed and well arranged. The illustrations are excellent, numerous and well annotated, and they include 39 coloured plates. From every point of view the book is to be highly recommended. Sister tutors should not miss it. They will find it most valuable for reference purposes, and for bringing their knowledge of these subjects up to date when preparing classes.

A refreshingly accurate and straightforward account of the launching of the attack on Sicily.

FOOD CONSUMPTION

The Nutrition Society Discusses Institutional Diets

All in charge of catering should have a knowledge of cooking. A doctor, administrative and ward sisters of the South London Hospital for Women and Children discover for themselves the value of dried eggs

"THE patient inhospital should have the optimum quality and quantity of food," said Dr. A. Lyall, at the Nutrition Society's twentieth scientific meeting, "so that he can learn from experience the value of various foods and also be assisted in recovery." The subject for consideration at the afternoon session of this meeting was 'Food Consumption: Data Obtained from Analysis of Institutional Diets.' The speakers were Miss E. M. Langley, Board of Education; who discussed 'School Diets'; Dr. M. Pyke, Ministry of Food, who spoke on 'Industrial Canteens'; and Dr. A. Lyall, Department of Clinical Chemistry, University of Aberdeen, on 'Hospital Diets.' Miss M. C. Broatch, Dietitian, King Edward's Hospital Fund, opened the general discussion.

School Meal Statistics

Miss Langley gave some cheerful facts about the number of schoolchildren having school meals, 1,500,000; the number of school canteens, nearly 12,000; and the percentage of elementary schoolchildren taking milk at school, 78.3 per cent. She threw some interesting sidelights on school meals. She thought the educational and social advantages of school meals almost as great as the nutritional ones. On the other hand, she gave as a disadvantage of the Oslo breakfast that it took half as long again to eat as the two-course dinner. The children wanted to rush out and play, the hall was needed for a second service, and the workers, mostly voluntary, were in a hurry to get on. Miss Broatch suggested that it was very valuable for the child to sit, rest and masticate, and the extra time was, therefore, rather an added advantage of the Oslo breakfast.

'There is no precise up-to-date information on the influence of industrial conditions,' Dr. Pyke said in his address, 'on people, especially of the influence of shifts and night work.' It was difficult, too, to define a meal. One assumed that people ate three meals a day, yet, if a meal consisted of taking 300 calories, many people had four, five and six meals a day.

Shifts and Calories

To show how a slight alteration in the times of shifts affected the number of calories and size and number of meals a worker took, Dr. Pyke compared two groups of railway employees doing the same type of work: the first had a 6 a.m. to 3 p.m. shift and took 3,550 calories at five meals, taking at their canteen only suet pudding and beer, as they would be home for 'dinner' by 4 p.m.; the second, on a shift from 8 a.m. to 5.30 p.m., took 3,480 calories at six meals and ate a full dinner at 1 p.m. at the canteen.

Another cause of the variation of caloric intake amongst people in the same occupation was local prejudice. Whilst canteens were not possible two miles down a coal mine, sandwiches were. In Lancashire and Durham the miners disliked cheese and considered it 'binding,' so their sandwiches contained only 650 and 610 calories, compared with 1,100 of those in Leicester and South Wales, where the miners enjoyed cheese. The average daily consumption of cheese in these four districts was 0.2, 0.2, 1.9 and 1.8 ounces, respectively.

Dr. Lyall's considerations on hospital diets were based on figures taken from three hospitals: a general hospital of 500 beds, with which a maternity hospital was associated, an isolation hospital and one for chronic sick, of 70 beds. In the general hospital 40 per cent. of the patients were not on a full diet, 6 per cent. were on a low, special diet, as they were extremely ill, and 5 per cent. were on milk only. His figures included food brought in by visitors, which was found to contain an average of 500 calories. Dr. Lyall suggested that food brought in should go to the sister to be distributed as and when suitable; kept in the locker it was unhygienic; when the patient recovered and went home much was wasted; if he died all was wasted.

Hospital Diets

In the maternity hospital the milk supply was the maximum for expectant and nursing mothers—viz., 1.07 pints daily. The average caloric intake had been 1,900, but by introducing a meal of the high-tea type this had recently been raised to 2,140. Dr. Ryall thought that 2,500 would probably be better for those who were not overweight.

In the hospital for the chronic sick the average caloric intake of the staff was 2,486; for the patients it was: male patients, 2,100, and female patients, 1,942; in the general hospital it was 1,680 and, with food brought, in, 2,200. These figures, Dr. Lyall thought, compared well with those in the King Edward Hospital Fund report on hospital diets.

During the discussion, Miss Broatch questioned a theory Dr. Lyall had put forward that hospital diets were easy, for they could be planned in advance, and cooking was on a large scale. She hoped that the variation that rationing had necessitated would continue in institutional meals after the war, and that the days when a patient could tell the day of the week by his meal would never return.

The hospitals supplying the best meals were those which bought from markets rather than from those which had contracts, and were apt, therefore, to miss some good foods as they became available. There were other things, too, which Miss Broatch wanted to see changed—the head cook who was not trained; the steward who had no experience of buying, and whose only training had been in the steward's office; the housekeeping sister who, although she had done excellent work, was not trained in all aspects of catering. The course for housekeeping sisters, although recognized, did not include cooking, and no one should be in charge of catering without a knowledge of cooking.

Equipment and Service

With regard to the food relatives brought in to patients, she considered it wrong to depend on these gifts. Everyone to-day realized that food was a contributory factor in healing, and a well-proportioned diet was especially necessary in a maternity hospital. Many hospitals to-day, she said, had to face the fact that their kitchens, made to provide one meal a day, would have to provide three in the future. This would cause considerable difficulty. In many places there was a lack of interest, a lack of staff, and a lack of equipment. The results of the King Edward's Hospital Fund survey showed that the standard of food in hospitals was not always one of which to be proud.

With regard to the service of food, Miss Broatch said that very often good food left the kitchen but by the time it reached the patient it provided a very poor meal. She thought the method of transporting of food to the ward and to the staff dining room should be given much consideration. With proper equipment the level of feeding in hospitals could be excellent, but at present the patient was often very poorly fed.

The Oslo Breakfast

During the discussion a member of the society said that the Oslo breakfast was originally arranged to supply the food deficient in the home and could not, therefore, at present be given entirely in full. Dr. Magee said there were still too many hospitals not aware of what could be obtained by special ration allowances for the patient, nor how to spend 'points' to their best advantage. If hospitals bought the full rations, cooked them well, and served them well, there should be no difficulty in feeding every patient well. Many hospitals were under-drawing their meat, fat, egg or dried milk ration. Patients in some hospitals looked for their bacon, margarine or butter ration in vain because some hospitals had the habit of providing only one cooked meal a day. This was not fair: the patient should have a complete diet in hospital: he was entitled to a square deal. There should be, however, more rigid control of the foods brought in.

Professor Marrack said that the question of

For the Student Nurse

Answers to State Examination Questions
By the Sister Tutor Section, Royal College of Nursing

FINAL EXAMINATION GENERAL NURSING PAPER

QUESTION 1.—Describe fully the nursing care of a case of gastro-enteritis in a child.

A child with gastro-enteritis should be nursed with full barrier precautions, preferably alone in a cubicle or room. Most types of gastro-enteritis are highly contagious, and scrupulous attention to detail is necessary in order to prevent other children and the nurse herself from becoming infected. If possible, the nurse attending this patient should not attend other children.

If the nurse has to prepare the feeds for her own patient, she must first scrub her hands thoroughly under running water and wear a gown and mask. The feeds are carefully prepared and everything used for their preparation is sterilized. The nurse must wear a gown and mask when attending to the child. She must keep her own finger nails cut short and scrub her hands under running water after attending to the child and before feeding it. She must not touch her own face or hair while her hands are contaminated. Everything for the patient's use such as thermometer, crockery, bedpan for the older child, and pail for soiled napkins, will be kept in the cubicle. Soiled linen will be soaked in disinfectant, cyllin, 1 fl. oz. to 1 gallon of water, before being sent to the laundry.

During the acute stage, the child must be kept warm and as quiet as possible. The temperature, pulse and respirations will be recorded four-hourly. The fluid intake and, if possible, the output will also be recorded. A stomach lavage or colon lavage may be ordered if the vomiting and diarrhoea are excessive. Normal saline is used. The buttocks should be washed and gently dried every time the child has its bowels opened. Dusting powder is sprinkled on to the skin or, if it becomes red, a little zinc and castor oil ointment can be applied. The mouth is gently cleaned with either glycerine boracis or mel. boracis. A little vaseline or liquid paraffin can be applied to the lips if they are dry. For collapse, diluted brandy or injections of nikethamide may be ordered. Occasionally, the appropriate dose of castor oil is ordered.

Nourishment is usually withheld orally until vomiting has ceased. Normal saline or Hartmann's solution followed by glucose 6 per cent., will be administered subcutaneously, intravenously or, in the case of an infant, it may be injected into the bone marrow. The nurse must report signs of oedema at once, as this may indicate excessive administration of saline.

The subsequent diet will be prescribed by the physician and will vary somewhat with the age of the child. The commencement is usually boiled water, normal saline, diluted milk given in small quantities frequently, gradually increasing to the normal diet of the child. A breast-fed baby should be returned to the breast as soon as possible. An older child may be ordered the 'tea and apple diet,' i.e., sweetened weak tea with no milk, and apple puree.

The stools will be examined bacteriologically at intervals and when the child has recovered and is pronounced free from infection, he is bathed and put into a fresh bed and the necessary disinfection carried out.

The nurse must be particularly observant when nursing this child, remembering that gastro-enteritis is frequently the fore-runner of other infections such as measles or meningitis.

INFECTIVE HEPATITIS (*Continued from page* 469)

hepatitis are variants of the same disease, but this has still to be confirmed.

Relapses and Second Attacks.—Both of these are rare. In an epidemic recently investigated by the writer the symptoms in the recrudescence of two relapsed cases were much more acute than during the initial attack, while in three out of four second attacks the reverse occurred—that is, the second attacks were less severe than the first.

Complications.—Complications are said to be very rare. Single cases of parotitis and ophoritis have been recorded. Recently the writer reported two cases of diabetes, one of chronic pancreatitis, and three of intermittent glycosuria, which followed attacks of infective hepatitis. It is, therefore, very probable that the pancreas is involved in this disease, and pancreatitis no doubt accounts for the very acute pain in the epigastrium which occurs in severe cases. The urine of those suffering from infective hepatitis should be frequently examined for sugar until the end of the convalescent period.

Mortality.—The mortality rate from this disease is very low, complete recovery being the rule.

Treatment

Treatment is simple, and consists of confinement to bed and the alleviation of symptoms. Plenty of fluid should be given—orange juice and glucose being particularly beneficial. The patient should also be placed on a light diet. Milk which has been skimmed to exclude the fats, but which still retains the proteins, is said to have a protective effect on the liver, and should be given liberally.

Prophylaxis

Isolation, particularly during the pre-icteric stage, should be maintained. As the majority of patients are schoolchildren the question of school closure arises, but it is doubtful if this step is justified as a means of reducing the incidence of infection. Close contacts should be excluded from school for several weeks.

OBITUARIES

It is with the deepest regret we record that the following officers of the Army Nursing Service are now presumed to have been killed in action at sea on February 12th, 1944:

Miss Eleanor Jane Young, S.R.N., Q.A.I.M.N.S.R., trained at the Berrington Hospital, Salop, and Mill Road Infirmary, Liverpool, from 1938—1941. Later she qualified as a State-certified midwife at the Walton Hospital, Liverpool, which she left in March, 1943. She joined the Q.A.I.M.N.S.R. in June, 1943. She embarked for overseas in July, 1943, and served in East Africa until February, 1944.

It is with deep regret that we record the death in the Middle East of Sister **Miss Hylda Beatrice Wills, S.R.N., T.A.N.S.,** born at Newton Abbott. Miss Wills trained at King's College Hospital, London, 1935—1938 and mobilized with a General Hospital in September, 1939. She has been serving in the Middle East since early in 1941.

We deeply regret to announce the death in England on April 21, 1944, after a long illness, of **Mrs. Clara Rogers, S.R.N., S.C.M., T.A.N.S.** Mrs. Rogers was a native of Exeter and received her training at the Royal Devon and Exeter Hospital, 1920—1924. She held the posts of sister of the women's ward and the out-patients department, at St. Paul's Hospital London, from 1928—1941 when she was mobilized for service with the T.A.N.S. She has since been serving in a military hospital in this country.

Miss Jessie Mary McRea, S.R.N., S.C.M., sister P/213924, T.A.N.S.—Killed on active service due to enemy action in Italy on March 15, 1944. Miss McRae, who was a native of Inverness, trained at Doncaster Royal Infirmary from 1933 to 1937. She was engaged in private nursing from 1938 to 1939 and completed her midwifery training in 1940. She was called up for military duties in December, 1940, and served at home for a short period before embarking for overseas.

Miss J. Woodliffe

We regret to announce the death of Miss Joyce Woodliffe on May 6. She died at Lodge Moor Isolation Hospital.

Miss Woodliffe, a student nurse at the Children's Hospital, Sheffield, was, the matron, Miss A. M. Parker writes, "a very promising probationer-nurse."

FOOD CONSUMPTION
(*continued from page* 475)

more frequent meals in hospital was debatable. Patients did not always need more than 2,000 calories, which were easily contained in the four meals as arranged at present. He thought that many nurses did not eat as much as 2,000 calories, for they ate little bread or potatoes.

Speaking on night shifts, a member said that often on night duty the appetite went, and it was, therefore, difficult for the worker to get adequate food. It would be interesting to see how long a worker took to adapt himself or herself; many workers had such short period shifts that it was impossible ever to get adapted, and some of them suffered from ascorbic acid deficiency. Incidentally, riboflavine was the only vitamin which appeared to contribute to efficiency.

The discussion closed on the note of calories rather than vitamins, and Professor Maynard of the United States, said how thankful he was to hear that in England there was not a new vitamin discovered at every meeting of the Nutrition Society, as there appeared to be in America, only to be discounted at the following session.

The Choice of a HYPOCHLORITE

Why Electrolytic?

"It is possible to obtain a solution even less irritating than Dakin's solution if we prepare it by the electrolytic method. Electrolytic Hypochlorite has not hitherto been employed in surgery on account of its defective keeping properties."

Carrel and Dehelly Military Medical Manuals "The Treatment of Infected Wounds," 2nd edition (1918), p. 24.

Why Milton?

Because *Milton*, the only stable brand of Electrolytic Sodium Hypochlorite, retains its effective strength for several years; and

Because *Milton*, either full strength or in the dilutions commonly employed, is far less alkaline than Dakin's solution of comparable strength:

Because recent work emphasises the lack of irritant action (this is largely due to the absence of free caustic alkali).

For blandness, stability, low alkalinity combined with effective proteolytic action and innocuousness of end products the choice is—'Milton.'

For quotations for Bulk Supplies for Hospitals, etc., or information with regard to irrigation technique, write Milton Antiseptic Ltd., John Milton House, London, N.7.

MILTON, the stable brand of Electrolytic Sodium Hypochlorite, non-caustic and of standard strength (1%)

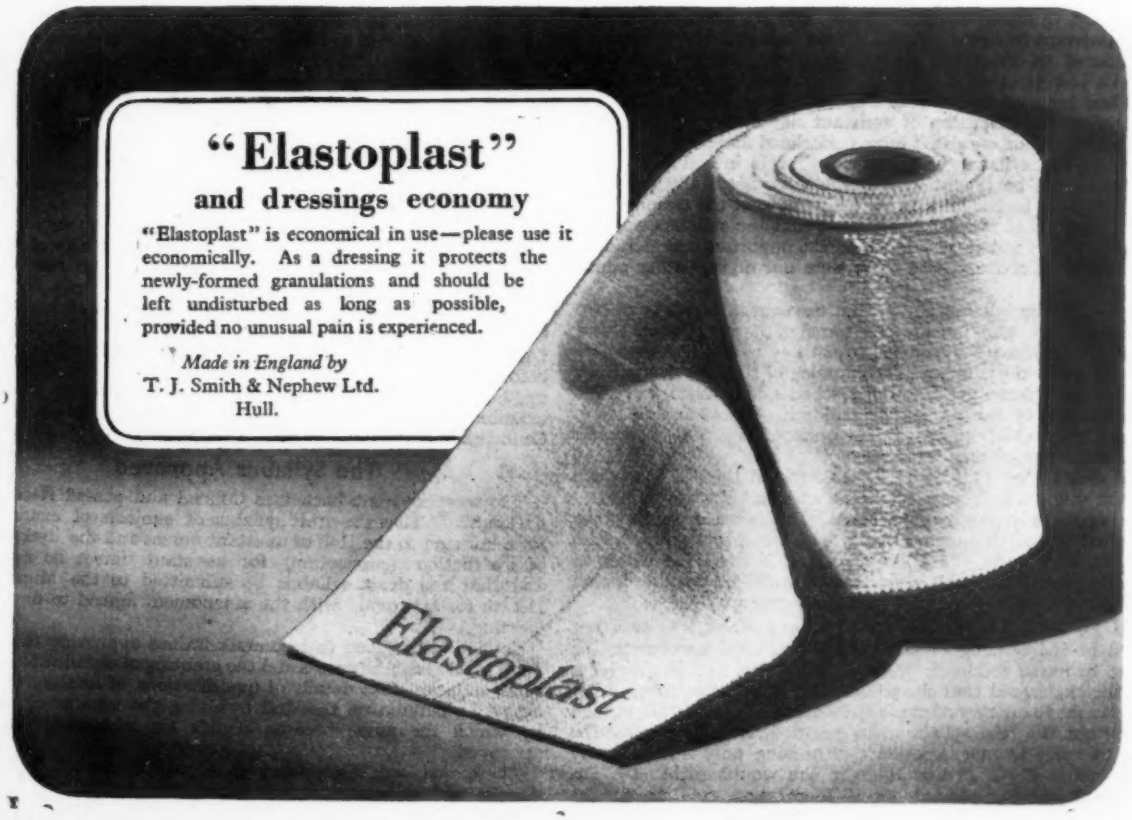
We may be planning a new and different world, but at first peek it'd better not look too different. Or else there'll be trouble—*loud* trouble! After all, if you were going to *be* a baby again, you'd still want the same small, comfy world around you; a world containing warmth, and mother, and simple trusted friends like Johnson's powder. What was best for you is now best for yours. The fundamental things don't change.

And they don't change much however old you are. You still have the same fastidious need for cleanliness and hygiene. If something is to lie against your skin, it doesn't hurt to know that it was made with the same care that is given to the famous baby powder. The same trusted name on the handle of your toothbrush is a reassuring thing to see. Johnson & Johnson have earned a famous name for intimate personal things. Bear it in mind.

Johnson & Johnson

the name that means **EVERYTHING** *in hygiene*

Makers of: Tek Toothbrushes, Band Aid, Adhesive Plaster, Surgical Dressings, First-Aid Kits, Dental Floss, Baby Cream and Baby Soap, and the famous Baby Powder.



The General Nursing Council for England and Wales

MISS D. M. SMITH, O.B.E., took the chair at the meeting of the General Nursing Council, on June 23. Members present agreed to the recommendations of the Registration Committee, which included a draft reply to the Minister of Health on the subject of the Nursing Reconstruction Committee's report approving of the registration of 33 nurses, 13 by examination and 20 by reciprocity, and the re-inclusion on the Register of 103 nurses who had hitherto failed to pay their subscriptions, the issuing of four duplicate certificates and 14 duplicate badges, and the admission of 81 nurses—46 general nurses, 5 nurses for mental diseases, 3 sick children's nurses, and 27 fever nurses—to the List.

Educational Matters

After discussion *in camera* Council approved, with amendments, the Education and Examination Committee's draft reply to the Minister of Health on the Nursing Reconstruction Committee's report. Council agreed to extend for two more years provisional approval of the Royal Liverpool Children's Hospital, Heswell, and Yeovil District Hospital, as complete training schools for sick children's nurses and general nurses, respectively.

On the recommendation of the Board of Education, Council gave provisional approval to one year whole-time pre-nursing courses for Part I of the preliminary examinations at the following schools: Woodford County High School for Girls, Woodford Green, Essex; Loughton County High School for Girls, Chigwell, Essex; Barnsley High School for Girls, Yorkshire; County Secondary School, Sydenham, Lewisham; Mill Mount Secondary School, York; Queen Anne Secondary School, York; Bar Convent Secondary School, York; York College for Girls, York.

The results and pass lists of the preliminary and final State examinations were on the table, and Council agreed that the names of those who had passed be referred to the Registration Committee for registration, and to receive the appropriate certificate.

The Assistant Nurse's Syllabus

Dr. H. M. C. Macaulay, B.Sc., M.D., D.P.H., giving the report of the Assistant Nurses' Committee, said that this committee had endeavoured to meet the points and criticisms made at the Council's last meeting, and also those made at the conference, which had been held since that meeting, on the draft syllabus of examination for admission of assistant nurses to the Roll. The principal alteration consisted in an underlined footnote (in capital letters) to the syllabus and preface: 'it is intended that all subjects should be taught in a simple and essentially practical manner.' This, he thought, gave the keynote of the training and met the point that members had made that the syllabus was too complex. Stress had also been laid on the importance of including the elements of cookery, and there were one or two other minor alterations.

One line in the syllabus stated that the course should be of two years' duration, and include the nursing of men, women and children. Dr. Macaulay said his committee would like to delete this. To make the training in the nursing of children compulsory might exclude some good training schools for assistant nurses, just because they did not contain children. Whilst experience in the nursing of children was, in his opinion, desirable, it should not, at this stage, be made compulsory.

Miss Helen Dey, O.B.E., R.R.C., suggested that, if the whole sentence was deleted, there might be assistant nurses trained in the nursing of only men or only women. Dr. Macaulay replied that if Council wished his committee would meet this point. Miss E. E. P. MacManus, O.B.E., agreed that it would be better to have it specifically stated, otherwise it would be possible for an assistant nurse to train in a hospital for women only.

Miss D. A. Lane asked if the assistant nurse who was not trained in the nursing of children would, after enrolment, be eligible to nurse children. Miss D. M. Smith, O.B.E., replying from the chair, said that she would, for the syllabus covered her being taught the theory of nursing children. Miss F. M. Campbell pointed out that the syllabus also guarded elsewhere against the assistant nurse having experience of nursing only men or only women. Miss E. C. Pearce thought she would rather see Dr. Macaulay's motion carried, as if there were children in the training hospital the nurses might not be trained in their care, if men and women only were specifically mentioned. Council could arrange not to recognize a hospital for training which did not have both men and women.

Professor R. M. F. Picken, M.B., Ch.B., D.P.H., asked why there was this difficulty about including children, for even if part of the training were in a hospital for the chronic sick which did not, and should not, in his opinion, contain children, assistant nurses could still become proficient in the care of children during their time at the infectious diseases hospital, where there must always be children. Miss Campbell replied that it would be very difficult to arrange to send all the nurses to infectious diseases hospitals.

Council then went into committee. Miss MacManus said that it had been pointed out to her that the major fever hospitals trained nurses for the Register, and that, as the Council did not yet know how much support they would receive for training assistant nurses in sanatoria, it seemed wise to leave the matter for the present.

Miss Dey said that her point would be covered if there were a rule preventing recognition of a hospital as a training school for assistant nurses which did not contain beds for men and women. She thought it necessary to have either this rule or a rule insisting on the nurse having experience of nursing men and women. Dr. Macaulay replied that he could agree to this rule without hesitation. Miss MacManus said she thought it would be clearer to say that the assistant nurse must have experience of nursing male and female patients and, at Dr. Macaulay's suggestion Council agreed to use the phrase 'include the nursing of both sexes.'

Chronic or Acute Work?

Professor Picken asked if the part of the syllabus which said that assistant nurses should spend a minimum period of one year in the nursing of the chronic sick precluded certain other types of hospital—for instance, the small general hospital, which was not suitable for training the nurse for the Register. Miss MacManus replied that the assistant nurse was essentially for the chronic sick, and it was, therefore, important that she should have thorough training in that type of nursing. Was Professor Picken's idea that she should have one year of chronic work and one of acute? Professor Picken replied, 'No, not exactly,' but infectious diseases hospitals were to be included when small general hospitals were not. Miss MacManus replied that, if the small general hospital were not a training school already, there might not be the machinery for training assistant nurses, and the hospital would be too small to take a large number. Professor Picken thought this argument applied equally to fever hospitals. Any fever hospital of sufficient size would have no place for training the assistant nurse, for it would be training nurses for the Register. He deprecated the suggestion that there should be encouragement to infectious diseases hospitals to run a lower level of nurses than other hospitals. Miss Smith pointed out that the syllabus was the definite opinion of the Assistant Nurses' Committee; if there was any discrepancy it could be sent back. Dr. Macaulay said that the point under discussion did not come before the committee, and, although he would be sorry to hold it up, he would be ready to send it back, or the committee could examine the matter later. Professor Picken concurred, and Council agreed to this.

The Syllabus Approved

The meeting went back into Council and passed Recommendation 27: 'That the draft syllabus of subjects of examination for admission to the Roll of assistant nurses and the draft course of instruction (curriculum) for assistant nurses be approved and that the draft syllabus be submitted to the Minister of Health for approval,' with the amendment agreed to during the meeting.

Council also agreed to recommendations approving the enrolment of 29 assistant nurses and the granting of certificates. A recommendation that details of qualifications of existing assistant nurses be entered on the Roll by giving the number of the rule by which the nurse became eligible for admission, was also approved.

There was one disciplinary case, which Council decided to dismiss with a caution.

Date of next meeting July 28.

News in Brief

Miners' Centre

HERTFORD Hall, near Bedlington, Northumberland, is now a miners' rehabilitation centre.

Burnley Developments

THE Burnley Corporation has agreed to extensions at Bank Hall Maternity Hospital, which will cost £7,620.

Thirteen Months' Work

THE Working Men's Committee of the Royal Victoria Hospital, Belfast, recently presented £1,716 18s., raised in 13 months, to endow three beds in memory of their former secretary.

Well Supported

THE Tunbridge Wells District Nursing Association has just celebrated its jubilee; the contributory scheme now has a membership of 4,225 persons.

Work Rewarded

MISS Crafts won the matron's prize at Leicester City General Hospital; she obtained the highest number of ward marks of any nurse in training.

Westmorland Wedding

MISS WHITAKER, sister of the Emergency Hospital, Southport, was married to Lieutenant P. L. Robinson, R.A.M.C., at Kendal, Westmorland. Miss Whitaker was trained at the Royal Infirmary, Liverpool, and Lieutenant P. L. Robinson was a member of the medical staff.

Specialist Team

"In 1944, Q.A.'s are especially trained, in teams and units, to nurse black-water fever and to play their part in typhus research teams," said Dame Katharine Jones, D.B.E., R.R.C., matron-in-chief, Queen Alexandra's Imperial Military Nursing Service, speaking at a luncheon of the Soroptimist Club of Greater London. "We have, too," she continued, "specialist theatre sisters for chest surgical units, neuro-surgical units, maxillo-facial surgical units, and special sisters for fever nursing which includes the nursing of typhus, enteric and smallpox."

Other points in her survey of the history of the Army nursing service from the days of Florence Nightingale to the present time were: the work done to extend the service by Princess Christian; the developments after the South African war and the present happy co-operation of the nursing sisters with the medical officers of the Royal Army Medical Corps.

Society of Registered Male Nurses

At a recent monthly meeting of the Society of Registered Male Nurses, it was reported that the Society's Memorandum on the 'Employment of Registered Male Nurses in the Mines' had been well received by the Minister of Fuel and Power, and that the British Medical Association's Industrial Medical Services Sub-Committee had received it for discussion. The Society's Manchester Branch had nominated Mr. F. A. W. Craddock to stand as a candidate for election to the General Nursing Council. In reply to a question: whether any member present suffered as a result of acceptance of the salaries recommended by the Rushcliffe Report, it appeared that no member had placed himself in such a position.

Prizegiving at the West Herts Hospital. Right: *Lady Davison, who presented the prizes.* Centre: *Sir Walter Halsey, Bt., O.B.E.* Left: *Miss G. Charlton, matron; and prizewinners*

A Veteran of Ladysmith

MRS. Jessie Hankin-Hardy, who nursed the wounded at the siege of Ladysmith, has died at Raunds, Northamptonshire.

A Welcome Guest

EIGHTY nurses formed a guard of honour when H.R.H. the Duchess of Kent visited Salisbury General Infirmary.

From Scotland

Scots on the Job

THE nursing staff of the Southern General Hospital, Glasgow, has raised £352 by means of a sale for various charities, including the Student Nurses' Field Ambulance Fund.

TWO PRIZEGIVINGS

West Hertfordshire Prizewinners

The presentation of prizes was made at West Hertfordshire Hospital, Hemel Hempstead, on June 10, by the Viscountess Davidson, M.P. Prizewinners were as follows: *Senior Nursing prize*, Miss Schiesser; *Junior Nursing prize*, Miss Holland and Miss Dixon; *Medical prize*, Miss Mahaim; *Gynaecological prize*, Miss Bond; *Surgical prize*, Miss Mendl; *Anatomy and Physiology prize*, Miss Young; *Certificates*, the Misses Guess, Smallcombe, Hawser, Mahaim and Clarry.

Prizegiving at Greenock

There was a large gathering of friends and guests at the recent prize-giving at Greenock Royal Infirmary. Mr. R. H. Blackwood presided and Mrs. Blackwood presented the following prizes:—*Medical prize.*—Miss J. E. Johnson. *Surgical prize.*—Miss L. T. Muir. *Gynaecological prize.*—Miss F. M'Donald. *Nursing prize.*—Miss A. S. Beattie (senior) and Miss M. M'Lennan (junior). *Best practical nurse.*—Miss H. H. Maclean. *Dietetics.*—Miss F. M'Donald. *Anatomy and Physiology* and *Hygiene and Dietetics.*—Miss I. W. Connie.

CARE OF MECHANICAL BEDS

Shortage of staff should not prevent the proper cleanung of castors of mechanical and other beds, for the bits of fluff gathered from the floor in the movement of the castor and the lack of oiling, cause far more trouble than any mechanical defect. A little care will reduce strain in moving the bed and save expense in replacing the castor.

The mechanized part of the bed must never be forced; if it does not function properly seek the help of an expert—a manufacturer or

(*Continued in next column*)

Substantial Loss

THE Bruntsfield Hospital, Edinburgh, and the Elsie Inglis Maternity Hospital, Edinburgh, show jointly a deficit of £1,475 on the year's working.

A Fatal Fall

MISS J. WILSON HALL, sister of the Henry Brock Hospital, Alexandria, has fallen down a staircase to her death. Her home was at Drymen, Glasgow.

Care at Birth

AT the Elsie Inglis Maternity Hospital, Edinburgh, during the past year, the maternal mortality rate was 1.5 per 1,000. Scotland's figure generally was 3.8 per 1,000. In England and Wales, for the year 1942, the figure was 2.54.

Garden Fete at Hackney

A most enjoyable and successful garden fete, organized chiefly by the local branch of the Rotarians, was held on Saturday, June 24, at the Hackney District Nurses' Association headquarters in Lower Clapton Road. The weather was perfect.

President Morley, of the Rotary Club, spoke of the devoted and useful work of the Queen's nurses in Hackney, and then called upon Charles Shadwell to open the fete. The inimitable 'Charlie' had—according to his own account—been let out for an hour or two by the B.B.C. After declaring the fete opened he auctioned a basket of strawberries and a couple of duck eggs in separate lots. There was some brisk repartee whilst he ran up the bidding to £4 for the strawberries and £2 10s. for the duck eggs.

The matron, Miss Gwynne-Edwards, was presented by Mrs. G. Atkins with a bouquet of gorgeous roses from the Rotary Club, and she told the audience how very much the Rotarians did for the Nursing Association, and how impossible it would have been to organize such a fete without their help. Mr. Shadwell was presented with a cigar, which, he said, he would 'show to Georgie Wood.' The visitors then enjoyed the side shows and spent their money on the many useful and decorative articles that were for sale on the stalls, before partaking of an excellent tea. The proceeds of the fete were just over £200, which beat all previous records.

(*Continued from previous column*)

supplier. To move the bed push low down rather than by the top of the head-end tube. The British hospital bed is one of the best in the world, and even those that have been dumped and forgotten may often be repaired and repainted in order to save steel and workers for the victory push.

Royal College of Nursing News

Membership forms may be obtained from the Secretary, Royal College of Nursing 1a, Henrietta Place, Cavendish Square, W.1., or from local branch secretaries

Public Health Section

Copies of 'The Place of the State-registered Nurse in the Public Health Service of the Future,' by Miss F. E. Frederick, health visitor, Woolwich (see *Nursing Times*, April 29), are obtainable, price 3d. each, from the secretary of the public health section, Royal College of Nursing, 1a, Henrietta Place, London, W.1.

Branch Reports

Bolton Branch.—There will be a meeting at Astley Sanatorium at 7 p.m. on Tuesday, July 11. Mr. Atkinson, J.P., will speak. Trolley 'bus from Bolton to Leigh. A No. 2, 18 or 26 'bus from Leigh (Railway road) to Astley Sanatorium. Alternative route, No. 18 'bus from Moses Gate to Leigh, which departs at five minutes to the hour.

Bradford Branch.—A general meeting will take place at 6.45 p.m. on Tuesday, July 11, at 28, Edmund Street, to receive the report of the annual meetings in London and to discuss any other business.

Manchester and East Lancashire Branch.—A general meeting of members will be held at St. Mary's Hospital (clinical lecture theatre), Whitworth Street West, Manchester, at 6.30 p.m. on Tuesday, July 11. Business: to discuss the Horder report. Members are asked to make themselves familiar with the report in order to enter into the discussion.

UNIFORM CONCESSIONS

THE Royal College of Nursing very much regrets the delay in answering the innumerable letters which have reached them in connection with uniform concessions. Shortage of staff has made a reply by return impossible, but every enquiry is dealt with in strict rotation.

NURSES' APPEAL FOR NURSES

Nation's Fund for Nurses

There is no doubt that the presence of universal dangers and tragedies brings a unity and a communal spirit which it is difficult to arouse in peaceful times. Only the incurable egoist remains unmindful of others, and such people are fortunately rare in these days: the majority are anxious and ready to do all they can to help and to relieve the sufferings of those who are going through times of trouble and distress. Our concern is for our nurses who are very old and alone and need our care and encouragement. Please help us to provide it for them.

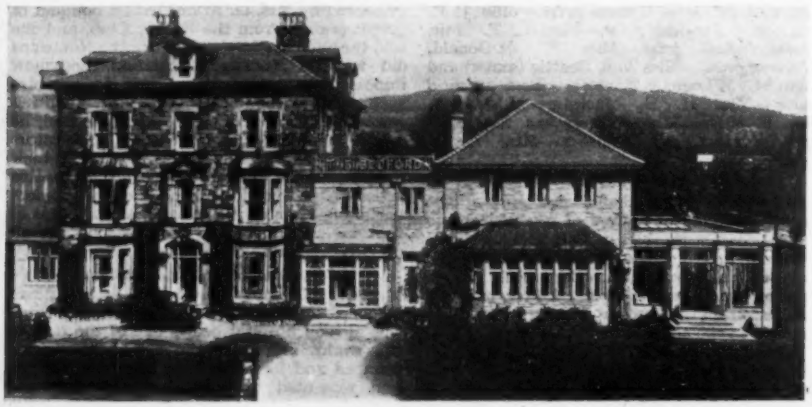
Rationing Without Tears

Cheerful Rationing (*No.* 55) gives some useful recipes to show the housewife fresh ways of serving the pilchards which are new to us and so rich in food value and economical of points. These recipes, obtainable from the Electrical Association of Great Britain, 20 Regent Street, S.W.1., always encourage the house-wife to spend her points wisely. (Price 2½d., post free.)

Rest Break House for nurses at the Bedford Hotel, Buxton



Coming Events

American Housing in War and Peace: an Exhibition

The Royal Institute of British Architects announces an exhibition of American Housing in War and Peace to be held at the Institute, 66, Portland Place, W.1, from July 19 to August 26. Prepared by the Museum of Modern Art in New York, the exhibition has been brought to London by the United States Office of War Information at the request of the Council of the Royal Institute of British Architects. It tells the story of American housing during and before the war.

To Help Seven A.T.C. Squadrons.—A Sunday afternoon concert is being given at the Coliseum on July 30 for the Hospital Saturday Fund and seven A.T.C. squadrons in Lambeth and Battersea, under the patronage of the Lady Louis Mountbatten. Among the artistes are Arthur Askey and his 'playmate' (Richard Murdoch), Ted Andrews and Barbara, Teddy Brown, Harriet Cohen, Joyce Grenfell, Olive Groves, Lorna Martin, Tommy Trinder, Ronald Waldman, with the Coliseum orchestra under Reginald Burstin, commencing 3 p.m.

The Royal Army Medical Corps on the Battle Fronts.—The National Savings Committee is sponsoring an exhibition, 'Healing the Wounded,' an account of the work of the R.A.M.C., at Boots the Chemists, Piccadilly, (North side), W.1, which is open for a month. Amongst the interesting exhibits are air-borne medical equipment, such as baskets of plasma, penicillin in its different stages of growth, and pictures of the wounded man's journey from the moment a member of the R.A.M.C. sees him fall until—only a short time afterwards—he reaches hospital. An officer is present to give first-hand accounts of battle-front treatments.

CANCELLATION

West Middlesex County Hospital, Isleworth. The garden party arranged for July has been postponed.

Retirement

After holding the post for 30 years, Miss D. E. Gordon, is retiring from the matronship of the Isolation Hospital, Loose, near Maidstone. Trained at the Royal Hospital, Richmond, Surrey, Miss Gordon has been a member of the Royal College of Nursing since its foundation and hopes, in spite of retirement, to be able to be a partner in its activities.

ABOUT OURSELVES

Nurses of the North Staffordshire Royal Infirmary, Stoke-on-Trent, who held a fun fair and gala for 'Salute the Soldier' week

Progress in South London

In the stately splendour of the Drapers' Hall the South London Hospital for Women and Children, S.W.4, recently held its annual general meeting. Speaker of the afternoon was Dr. Charles Hill, secretary of the British Medical Association, who outlined the main points of the White Paper on a National Health Service, as they concerned the voluntary hospitals.

The hospital is now a recognized training school for Part 2 of the Central Midwives' Board examinations, and, despite any threats of submergence of the voluntary hospitals, the South London Hospital is launching a seven year covenant scheme to raise £100,000 to carry on its work for women and children in South London. The total number of beds is now 224.

County Council Successes

Mr. Somerville Hastings, M.S., F.R.C.S., J.P., the recently appointed chairman of the London County Council, presented one gold and eight silver medals to nurses of the London County Council hospitals in the County Hall, last month. Twelve sisters also received certificates of proficiency in housekeeping, and men of the Council's ambulance and hospital services received brooches and gold medals, awards of the Royal Society for the Prevention of Accidents, for 10 and 20 years' service without being involved in accidents in which they might be considered blameworthy.

Mr. Reginald Stamp, the first layman to hold the position of chairman of the Hospital and Medical Services' Committee, took the chair. He congratulated the winners, and hoped that conditions would soon allow the Ministry of Labour and National Service to withdraw the suspension of the housekeeping course in the Council's hospitals. Nurses were luckier than medical students, Dr. Hastings said, for even whilst studying for their profession, they were able to derive a great deal of satisfaction from doing useful work. 'Remember,' he said, 'you are playing an important part in a crisis in the lives of your patients.' Only by realizing the importance of their work and so deriving a sense of satisfaction, would nurses be able to do their job in the best possible way.

The following medals and awards were received :—*Gold medal.*—Miss K. R. Blair (Lambeth Hospital). *Silver medals.*—Miss G. B. Rainey (Hackney Hospital), Miss M. M. Pritchard (St. Olave's Hospital), Miss G. A. Aschenheim and Miss H. M. Gibbs (Lewisham Hospital), Miss R. Najar (St. Peter's Hospital), Miss C. Ellison, Miss R. Munter (North Eastern Hospital) and Miss P. M. Howarth (North Western Hospital).

Dartford Prizegiving

The prizegiving day and garden party of the County Hospital, West Hill, Dartford, was held on June 24. Medals, certificates and prizes were presented at 5 p.m. after which races, sports and side-shows were enjoyed.

Prizes were awarded as follows :—*Gold medal and hospital certificate.*—Miss Mary A. Twyman. *Silver medal and hospital certificate*—Miss Stella W. Adlington. *Bronze medal and hospital certificate.*—Miss Iris A. S. Koppe, Miss Joyce M. W. Nowell, Miss Agnes Walker, Miss Dorothy Harding, Miss Helen Shanahan, and Miss Cora Bond. *Matron's prize for efficiency in general nursing.*—Miss Cora Bond. *Medical Superintendent's prize*—Miss Iris Koppe.

Neutralize Excessive Acidity and End
INDIGESTION

One of the minor, but distressing accompaniments to convalescence and pregnancy is some form of indigestion. The unfailing neutralizing qualities of 'Milk of Magnesia' in all cases of excessive acidity of the stomach end embarrassing eructation, relieve heartburn and re-establish normal assimilation. A convenient form of this widely recognised remedy is supplied in 'Milk of Magnesia' Tablets — mint flavoured and palatable. Each tablet is equal to one teaspoonful of the liquid.

'MILK OF MAGNESIA' BRAND TABLETS

'Milk of Magnesia' is the Registered Trade Mark of the Phillips' preparation of Magnesia.

MENOPAUSAL SYMPTOMS ?

MENOPAX *indicated!*

★ STILBŒSTROL DIPROPIONATE
plus
★ BROMISOVALERYLUREA

CAUSAL and SYMPTOMATIC REMEDY for the relief of menopausal symptoms such as **HOT FLUSHES of the face and neck, NERVES, GIDDINESS, PALPITATION, HEADACHES, EAR NOISES, INSOMNIA, "PINS AND NEEDLES," ENDOCRINE OBESITY, ITCHING etc.**

★ STILBŒSTROL DIPROPIONATE *acts similarly to the natural œstrogens, but is several times more active, and its action more prolonged given by mouth.*

★ BROMISOVALERYLUREA *is an entirely safe and reliable sedative without toxic effects, less drastic than Barbiturates, but more effective than Bromides or Valerian.*

NO SIDE EFFECTS **NO NAUSEA**

If you are attending a patient who is between 40-50 and suffers from any of the above symptoms, consult her doctor about Menopax.

Prices 5/7½ & 11/3 from Boots, Timothy Whites, Taylors and all leading chemists

FREE TO NURSES. Readers of the *Nursing Times* are cordially invited to send for FREE PROFESSIONAL SAMPLE OF MENOPAX, and 3d. in stamps for a copy of the Book "The Crisis in a Woman's Life."

OXO LABORATORY PREPARATIONS

THE EARLY YEARS

The early training of children in the regular use of a reliable dentifrice is essential in the interests of their future health and well-being. Kolynos Dental Cream may be recommended with complete confidence. Mildly abrasive, its solvent action ensures the complete removal of food debris, one of the primary causes of tooth decay. Most children appreciate the refreshing properties of Kolynos and enjoy its pleasant fresh-mint flavour.
